

Monica HQ

This version will use the apache image and add a mysql container. The volumes are set to keep your data persistent. This setup provides **no ssl encryption** and is intended to run behind a proxy.

Make sure to pass in values for `APP_KEY` variable before you run this setup.

Set `APP_KEY` to a random 32-character string. You can for instance copy and paste the output of `echo -n 'base64:'; openssl rand -base64 32`.

1. Create a `docker-compose.yml` file

```
version: "3.4"

services:
  app:
    image: monica
    depends_on:
      - db
    ports:
      - 8080:80
    environment:
      - APP_KEY=
      - DB_HOST=db
      - DB_USERNAME=usermonica
      - DB_PASSWORD=secret
    volumes:
      - data: /var/www/html/storage
    restart: always

  db:
    image: mysql:5.7
    environment:
      - MYSQL_RANDOM_ROOT_PASSWORD=true
      - MYSQL_DATABASE=monica
      - MYSQL_USER=usermonica
      - MYSQL_PASSWORD=secret
    volumes:
```

```
- mysql: /var/lib/mysql  
restart: always
```

```
volumes:
```

```
  data:
```

```
    name: data
```

```
  mysql:
```

```
    name: mysql
```
