

# Access Proxmox Server Remotely - Virtual Console not Loading

So you have Nginx Proxy Manager setup to remotely access your Proxmox server. Everything is working fine *except* your virtual console? This is a common issue and I have an easy fix!

Step 1: Edit the Proxy Host

Turn on the switch for "Websockets Support" then save it.

Step 2: Done.

As always, PLEASE exercise caution when exposing this over the internet. At the very least, [enable Proxmox TFA](#) and add another layer of security to your Proxmox host.

Check out my [Youtube channel](#) for self hosting related content!
